BROWNSBORO Master Plan

"Planning for the Future of Oldham County"

Environmental Resources, Open Space, and Farmland Preservation

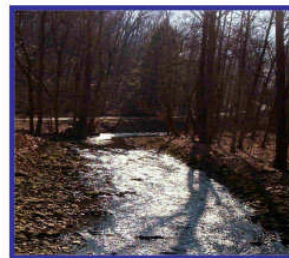

The Environmental, Open Space, and Farmland Preservation goals are to:

Recognize and protect natural resources, farmland, and the Harrods Creek Watershed, preserve and enhance Brownsboro's scenic corridors, and encourage the creation of connected greenways and wildlife corridors in the Brownsboro Planning Area.

Here are some of the rich natural treasures and resources within the Brownsboro Planning Area identified and captured in this photo gallery by Planning Staff and Task Force Members.

*Know of a natural resource worth preserving?
Is there beautiful scenery or other natural landscapes that you would like to see undisturbed?
Are you a land owner who is interested in conserving your land for future generations?*

On the numbered sheet please record your Environmental interest and mark the corresponding number on the map. Your information will be incorporated into future research for this topic area for the Brownsboro Master Plan.
